| ENTITY                                                   | FIREPOWER                                                                                         | HAS DONE                                                                                                                | MUST / CAN'T                                                                                       | WANTS                                                                                              | USIA ANGLE                                                          |
|----------------------------------------------------------|---------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| INSIDE COMMERCE                                          |                                                                                                   |                                                                                                                         |                                                                                                    |                                                                                                    |                                                                     |
| <b>CHIPS Program Office</b><br>Bill Frauenhoffer         | \$39B grants (~\$34B awarded); \$75B loan authority, barely used; equity conversions (Intel ~10%) | \$33.7B signed awards (~20 cos.: Intel, TSMC, Micron, Samsung...); 2025 pivot — Intel grants became \$8.9B equity stake | Fund U.S. semiconductor facilities / recipients barred from China expansion; semis only, U.S. only | Hold grants to ≤~4% of project value; take equity/upside for taxpayers                             | In-house grants; renegotiations set our equity precedents           |
| <b>EDA</b><br>Ben Page (acting)                          | Grants: public works (~\$450M/yr), \$1.5B disaster supplemental, Tech Hubs (~\$541M appropriated) | Hundreds of grants/yr at modest size; deployed \$3B ARPA portfolio incl. \$1B regional challenge                        | Distressed-area economic development / generally can't fund for-profits directly; not deal-scale   | Operational streamlining; workforce & critical-industry ecosystems; surviving its own budget fight | Site/workforce complement; referral home for sub-\$1B               |
| <b>ITA / SelectUSA</b><br>William (Will) Kimmitt         | No money — FDI facilitation, state network, Commercial Service, annual Investment Summit          | \$135B+ cumulative facilitated FDI since 2011; 2026 Summit: \$56B in commitments                                        | Promote trade & inbound investment / state-neutral; has no incentives of its own to offer          | Maximize inbound FDI as the complement to the tariff/reshoring agenda                              | FDI origination funnel + state channel                              |
| DEFENSE                                                  |                                                                                                   |                                                                                                                         |                                                                                                    |                                                                                                    |                                                                     |
| <b>DoD OSC</b><br>David A. Lorch                         | \$200B+ loan authority (P.L. 119-21) incl. \$100B critical minerals; targets \$1-5B loans         | First loan Aug 2025 (\$150M MP Materials); ~\$2B conditional commitments across rare-earth chain                        | Credit for defense-critical tech & minerals / no grants, no equity; pilot sunsets Oct 2028         | Mine-to-magnet lending at \$1-5B checks; prove out the new \$200B authority                        | Scaled co-lender — pair their \$200B debt authority with our equity |
| <b>DPA Title III</b><br>Michael P. Cadenazzi Jr.         | Purchases, purchase commitments, grants; \$5B OBBBA minerals fund; \$400M equity-style authority  | 222 investments / \$3.6B FY18-24; 2025: \$400M MP Materials equity stake, \$5B minerals push                            | Expand industrial-base capacity / needs presidential determination + defense nexus                 | Mine-to-magnet at speed; energetics and munitions supply chains                                    | Speed lever where defense nexus exists                              |
| <b>IBAS</b><br>Dr. Kristin Schaaf (acting)               | Grants/OTAs; FY26 request ~\$2.3B — a big step-up from hundreds of millions                       | Hundreds of targeted projects since 2014: castings/forgings, energetics, hypersonics, workforce                         | Fix defense industrial-base gaps / grants only — no loans or equity; defense tie required          | Critical minerals & chemicals, munitions, solid rocket motors                                      | Small fast checks for package gaps                                  |
| <b>DLA / Stockpile</b><br>Lt. Gen. Mark T. Simerly (USA) | Stockpile purchases: \$2B OBBBA minerals fund; IDIQ offtake-style contracts (\$45M-\$500M)        | Pivoted 2024-25 from selling down to buying hard: antimony, gallium, germanium, rare earths, cobalt                     | Hold strategic materials for defense / defense purposes only; releases tightly restricted          | Rebuild inventories exposed to Chinese export controls; obligate the \$2B fast                     | Offtake/price floors — demand certainty > subsidy                   |
| ENERGY                                                   |                                                                                                   |                                                                                                                         |                                                                                                    |                                                                                                    |                                                                     |
| <b>DOE LPO</b><br>Gregory (Greg) A. Beard                | Energy Dominance Financing: \$250B authority through 2028; ATVM limited post-OBBBA                | Tens of \$B closed since 2005 (Tesla, Vogtle); ~\$100B late-2024 wave; now nuclear, grid, AI power                      | Finance energy projects with repayment prospect / ≤80% of costs; energy nexus required             | Power for AI, grid reliability, nuclear restart, minerals with an energy nexus                     | Senior debt that stretches our equity; engage at intake             |

| ENTITY                                         | FIREPOWER                                                                                       | HAS DONE                                                                                                 | MUST / CAN'T                                                                                       | WANTS                                                                                         | USIA ANGLE                                                              |
|------------------------------------------------|-------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| <b>DOE MESC / OCED</b><br>Audrey Robertson     | ~\$6B battery/materials grants (rounds 1-2 committed; ~\$725M round 3); demo office gutted 2025 | ~\$3B round-1 battery grants + ~\$3B round-2 selections; \$12.4B of demo awards canceled in 2025         | Battery & supply-chain grants per BIL / ~50% cost share; no foreign entities of concern            | Mine-to-magnet, battery & magnet manufacturing, processing innovation                         | Battery/grid grants; timing = their funding rounds                      |
| <b>INDEPENDENT AGENCIES</b>                    |                                                                                                 |                                                                                                          |                                                                                                    |                                                                                               |                                                                         |
| <b>DFC</b><br>Benjamin (Ben) Black             | \$205B exposure ceiling (FY26 NDAA); loans, guaranties, insurance; new \$5B equity fund         | Record \$12B commitments FY24; slowed to \$3.6B FY25 through transition and lapse; reauthorized Dec 2025 | Mobilize capital in developing countries / not in ~20 wealthiest; ≤10% high-income                 | Economic statecraft: minerals & rare earths, energy/LNG-linked, countering PRC                | Foreign upstream links; newly reauthorized, statecraft-aligned          |
| <b>EXIM</b><br>John Jovanovic                  | \$135B exposure cap (~\$100B headroom); CTEP ~\$27B reserve; new \$100B supply-chain initiative | FY25: \$8.7B authorized supporting \$10.1B exports; portfolio exposure \$34.8B                           | Finance exports the private sector won't / charter dies Dec 31 2026; 2% default cap; content rules | Reauthorization with CTEP expansion and a domestic/supply-chain financing mandate             | Export-nexus financing; motivated by charter politics                   |
| <b>USTDA</b><br>Thomas R. Hardy (acting)       | ~\$87M/yr: feasibility studies, project prep, reverse trade missions — no financing             | \$127B+ exports facilitated cumulatively; \$226 of exports per program dollar (10-yr avg)                | Prepare overseas projects using U.S. tech / planning money only — no construction finance          | Energy dominance, minerals supply chains, countering PRC procurement influence                | Feasibility money for allied supply chains                              |
| <b>SBA SBIC</b><br>Kelly Loeffler              | \$5B/yr guaranteed leverage to licensed funds; \$53B total program capital (record FY25)        | FY25 biggest year ever: 48 new SBIC licenses, record green-lights                                        | Capital to small business via private funds / no direct investing; size standards apply            | Steer SBIC capital into manufacturing, critical tech, defense industrial base                 | Fund-level leverage for critical-tech capital                           |
| <b>OTHER DEPARTMENTS</b>                       |                                                                                                 |                                                                                                          |                                                                                                    |                                                                                               |                                                                         |
| <b>Treasury</b><br>Scott Bessent               | 48D uncapped (construction must start before 2027); 45X uncapped; 48C exhausted; CFIUS chair    | \$10B 48C fully allocated; administers 48D/45X behind the fab boom; US Steel golden-share NSA (2025)     | Administer credits as written / cannot extend them — 48D cliff Dec 2026                            | America First Investment Policy: fast-track allied capital, restrict PRC-linked               | Tax credits first; CFIUS alignment existential — our capital is foreign |
| <b>USDA Rural Dev</b><br>Todd Lindsey (acting) | B&I loan guarantees (~\$3.5B FY25); 9003 biorefinery up to \$250M/project; REAP                 | Record FY25 B&I year (~\$3.5B); ~\$13.4B cumulative core obligations                                     | Rural economic development / rural areas only (≤50k pop.); mostly guarantees                       | Faster OneRD lending; biomanufacturing; Farm Bill stability (extension expires Sept 2026)     | Rural siting + bio; check eligibility at site selection                 |
| <b>DOT Build America</b><br>Morteza Farajian   | TIFIA (~10-14× per subsidy \$); RRIF \$35B authority (~\$25B headroom); PAB cap ~exhausted      | ~\$29B credit portfolio + ~\$29B PABs (Brightline...); ~\$50B P3 pipeline pending                        | Administer DOT credit programs / infrastructure only; TIFIA ≤33% of costs; investment-grade        | Expand P3s; lift PAB cap; TIFIA/RRIF growth in the next surface bill (auth expires Sept 2026) | Enabling infrastructure around megasites                                |
| <b>HHS BARDA</b><br>Gary L. Disbrow            | ~\$1B/yr advanced R&D; ~\$850M BioShield fund; BioMaP-C manufacturing consortium                | Scores of FDA-approved countermeasures; Operation Warp Speed; now onshoring API manufacturing            | Advanced development of medical countermeasures / no basic research; designated threats only       | Onshore essential-medicine and MCM manufacturing; late-stage development                      | Pharma co-investor; frame as health security                            |
